

# Burning A Disc Using InfraRecorder

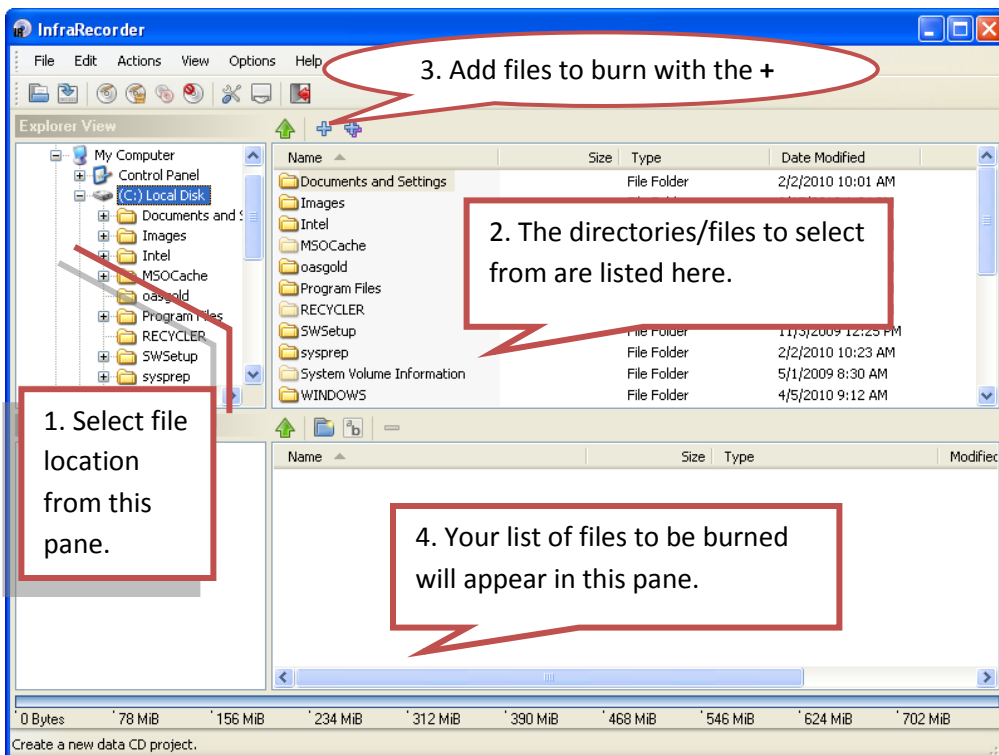

On the PC desktop, double click on the Accessories and Utilities folder.

Double click the InfraRecorder icon.

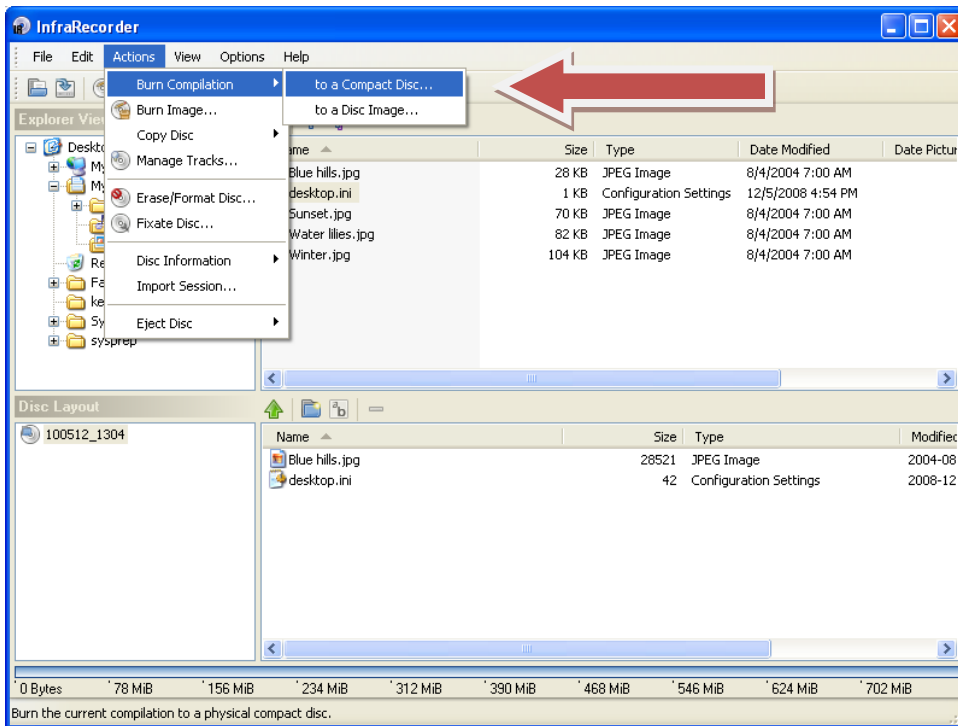

Click on the button, indicating the type of files you'd like to burn. For Word, Excel, PDFs, etc., select **Data Disc** and **CD** or **DVD** as appropriate.

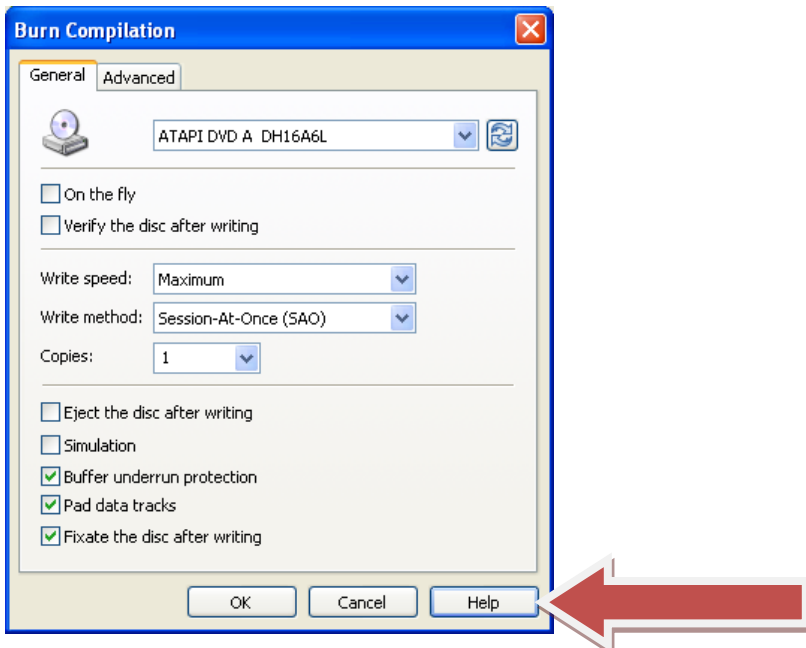

At the next screen the pane to the upper left allows you to maneuver to the location of the file(s) you wish to burn. The pane on the upper right lists the directory and/or files you can select from. The lower right pane will list the directories and/or files you've selected to burn. You select files by clicking on the blue + above the upper right pane.

When finished selecting files to be burned you may select **Actions, Burn Compilation, To a Compact Disc**.

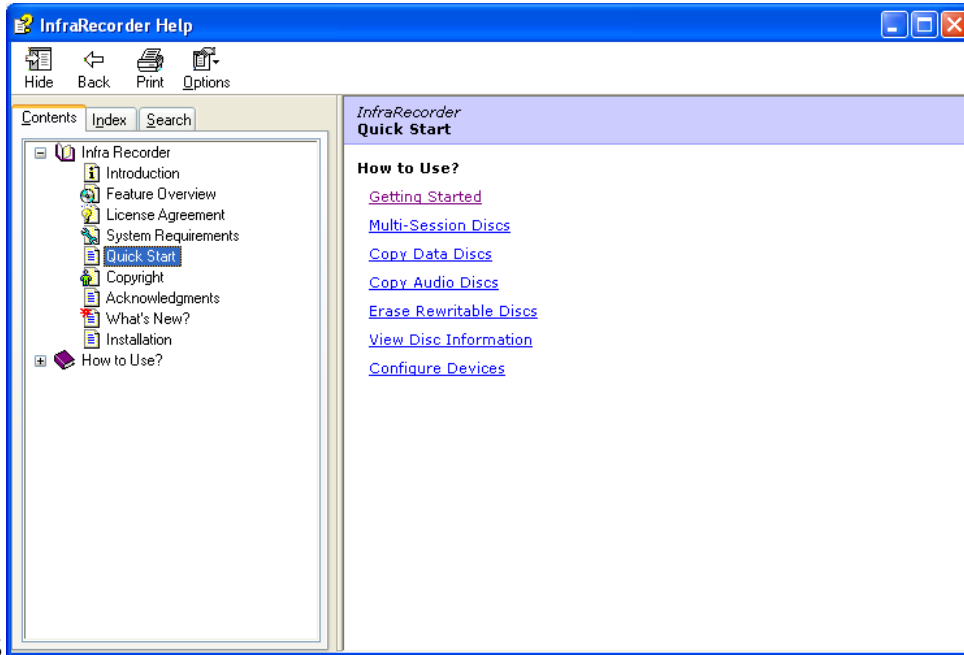

The next screen shows the location of your CD/DVD and the burning options. If unsure about which options to select, click on the **Help** button to see the pros/cons of each choice. For instance, selecting “On the fly” may result in more errors.

If you've selected “Eject the disc after writing” your CD/DVD should eject automatically when done. Otherwise you may manually eject the disc.

To view more detailed information about using the InfraRecorder program, click on **Help** on the Menu bar. Select **Help Topics** and **Quick Start** then your desired topic.
